DETAILED ACTION

Claim Objections

1. Claim 3 is objected to because of the following informalities:

Re claim 3, line 1: Substitute "POTS" with –plain old telephone service (PTOS)--.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3, 7-10, 14-20, 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sehr (US 5,875,432) in view of Hirano et al. (US 5,293,464)(hereinafter referred to as 'Hirano').

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Sehr Sehr teaches a computerized voting system comprising communication device or a computer (14) coupled to a network (23) for connecting a major voting entities and a link (16) for connecting local system wherein such connection including a telephone and modem, a displaying device (15) of the computer also serving as a voter interface unit display the user interface or template (Figs. 2-5) confirming a voter's identification information by authenticating a voting card provided by voter and/or verifying the voter

Art Unit: 2876

with biometric data (e.g., finger prints, voice, signature, retina, etc.) (104, 104.1, 105, 105.1, 106, 106.1), deliver or display the instructions and voting choices of the voting (110), accepting the voting choice made by voter and delivering/storing the result to the databases (10, 20, 30) of the voting station and tabulation and certification center (2 and 3), inquiring to the voting's station's database for eligibility of the particular voting campaign (108 and 108.1) (see Figs. 1-6; col. 2, lines 40-51; col. 4, line 47- col. 6, line 64).

However, Sehr fairly suggest that the computer comprises a disability related devices.

Hirano teaches that a computer (2) is connected with a Braille input/output unit (1) wherein the Braille input/output unit comprising a Braille keyboard (1b) serving as inputs means and a tactile reading display (1b) and a voice synthesizer (1c) serving as outputs means (see Fig. 1; col. 3, lines 4-50).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of the Hirano to the teachings of Sehr in order to provide an user-friendly system means wherein the disabled individual can participate in a electron event using the Braille input/output means. Moreover, such modification would increase an accessibility means since the Braille input/output unit can be connected with any computer equipped with an expansion bus for the disabled individual accessing the system therewith. Furthermore, such modification would provide an alternative means for instructing the voting procedure using the voice outputs unit, and therefore an obvious expedient.

Application/Control Number: 10/038,785

Art Unit: 2876

4. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sehr as modified by Hirano as applied to claim 1 above, and further in view of Miyagawa et al. (US 5,732,222)(hereinafter referred to as 'Miyagawa').

The teachings of Sehr/Hirano have been discussed above.

Although, Sehr/Hirano teaches the remote election apparatus having a disability related devices, they fail to particularly teach that the interface unit confirm the voter's selection.

Miyagawa teaches that a voter can confirm (P8) the selection of the candidate, displaying confirmation screen immediately voter made selection (P7), re-casting (P5-P8) the candidate prior to processing the voting or correcting the error (see Figs. 43-45; col. 22, line 45- col. 23, line 22).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Miyagawa to the teachings of Sehr/Hirano in order to provide an improved and an enhanced system means for verifying the voter's selection prior to the casting of selection and providing a options to re-casting the candidate if he/she wants to change the candidate for particular vote, and therefore an obvious expedient.

Application/Control Number: 10/038,785

Art Unit: 2876

5. Claims 11-12, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sehr as modified by Hirano as applied to claim 1 above, and further in view of van Zoest et al. (US 6,496,802)(hereinafter referred to as 'van Zoest').

The teachings of Sehr/Hirano have been discussed above.

Although, Sehr/Hirano teaches the remote election apparatus having a disability related devices, they fail to particularly teach that the interface unit provide an option to connect the voter with a live worker.

However, van Zoest teaches that an electronic system for accessing the live online help from a customer service representative (see col. 13,lines 48-55).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the live online help as taught by van Zoest to the election system of Sehr/Hirano in order to provide an real time assistance for the disabled voter if he/she need an aid during the voting processing. Moreover, such modification would provide a rapid processing means for resolving any difficulties/problems that each individuals may be encountered during voting event, due to the fact that such real time responding system would substantially reduce the voting time to conduct the voting event within the predetermined period of time, and therefore an obvious expedient.

6. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sehr as modified by Hirano and van Zoest, and further in view of Gatto (US 6,149,055).

The teachings of Sehr/Hirano/van Zoest have been discussed above.

Art Unit: 2876

Although, Sehr/Hirano/van Zoest teaches the remote election apparatus having a disability related devices, they fail to particularly teach that the interface unit is determined the type of disability device and the connecting the appropriate the live poll worker.

However, Gatto teaches to display different type of menu according to the identification information provided by user (see col. 7, line 45- col. 8, line 5).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Gatto to the teachings of Sehr/Hirano/van Zoest in order to provide a customizing means for supporting the different type of menu according to the individuals needs, e.g., displaying/outputting menu using the Braille output unit if the identification information is indicated the user is in need of such device and providing the online help via the Braille input/output unit appropriately, and therefore an obvious expedient.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure;

Konrad [US 5,544,320] discloses a remote information service access system,

McClure et al. [US 6,250,548) discloses an electronic voting system,

Ishiyama [JP 02001067508A] discloses a remote voting system for handicapped person.

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Seung H. Lee whose telephone number is (703) 308-5894. The examiner can normally be reached on Monday to Friday from 7:30 AM to 4:00 PM.

If attempt to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee, can be reached on (703) 305-3503. The fax-phone number for this group is (703) 308-5841 or (703) 308-7722.

Communications via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [michael.lee@uspto.gov].

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0956.
